#### The Psychology of Critical Thinking

## How Critical Thinking is an everyday survival skill!

Claudia Fernandez, DrPH, MS, RD, LDN University of North Carolina, Chapel Hill

Critical Thinking is a self-directed process by which we take deliberate steps to think at the highest level of quality.

#### Master Thinker

Good habits of thought become 2nd nature

#### Advanced Thinker

Keeps up with disciplined practice in thinking

# Practicing Thinker Aware of the need to actually practice thinking

## Beginning Thinker

Aware of problems in thinking and trying to improve but without regular practice

## Challenged Thinker

Faced with significant problems in our thinking

#### Unreflective Thinker

Unaware of significant problems in our thinking

## **Standards of Reasoning and Questions**

Test for:	By asking this:
CLARITY	Can you give me an example?
	Can you elaborate?
	Could you illustrate what you mean?
ACCURACY	How could we check on that?
	How could we verify that?
PRECISION	Could you be more precise?
	Could you give me more details?
DEPTH	What factors make this a difficult problem?
	What are some of the difficulties we need to deal with?
LOGIC	Does all this make sense together?
	Does your first paragraph fit in with your last?
	Does what you say follow from the evidence?
RELEVANCE	How does that help us with the issue?
	Hoes does that relate to the problem?
FAIRNESS	Am I sympathetically representing the viewpoints of
	others?
	Do I have a vested interest in this issue?
SIGNIFICANCE	Is this the most important problem to consider?
	Which of these facts are most important?
	Is this the central idea to focus on?
BREADTH	Do we need to look at this from another perspective?
	Do we need to look at this in other ways?

#### **Egocentric Thinking**

Innate Ego-centrism	"It's true because I believe it"
Innate Socio-centrism	"It's true because WE believe it"
Innate Wish Fulfilment	"It's true because I want to believe it"
Innate Self-Validation	"It's true because I have always believed it"
Innate Selfishness	"It's true because it's in my selfish interest to believe it"

### S.E.E.I.

- STATE in your own words what someone else has said or written or the key concepts, problem or question at issue
- ELABORATE on your statement.

  "In other words..."
- EXEMPLIFY: give an example of the concept from your life and from the content
- <u>ILLUSTRATE</u>: create an analogy, metaphor, simile, graph, chart, cartoon, etc.

#### The elements of thought...

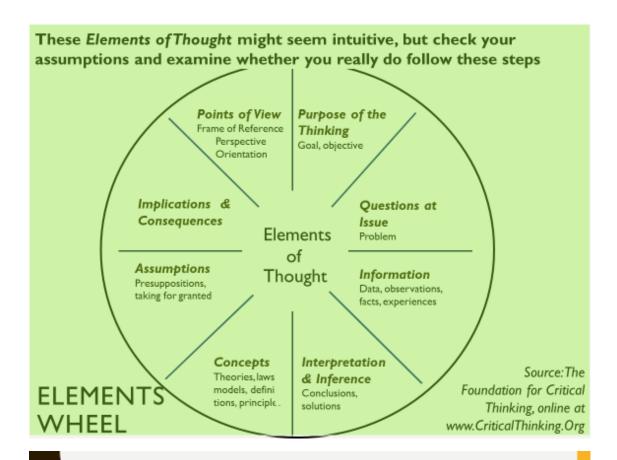

In attempting to answer a question
we think for a purpose
within a point of view
based on assumptions

leading to implications and consequences.

We use data, facts, and experiences
to make inferences and judgments
based on concepts and theories

Make sure your thought process includes these steps. It is like showing your work in math class.

#### Reflecting on your knowledge of thinking

Test yourself by writing your answers to the following:

Can you describe the role that thinking is playing in your life? (Be as clear and as detailed as you can.)

- I. What was a recent assumption you made (that you should not have made)?
- What is a recent concept you formed (that you previously lacked)?
- 3. List five inferences that you made in the last hour.
- Name and explain a point of view that you sometimes use to guide your thinking.
- Briefly describe how you analyze and assess thinking.
- Name some intellectual standards (e.g. fairness, relevance, accuracy, etc.) you use. Explain how you apply them.
- 7. Explain the role of egocentric thinking in your life.
- Take one or two intellectual traits (i.e. intellectual humility, courage, or empathy, perseverance) and explain what you are doing to try to embody them.
